

Bird Checklists of the United States

Big Bend National Park

Brewster County, Texas

-
- [Information on Big Bend National Park](#)
 - [Big Bend National Park Mammals Checklist](#)
 - [Big Bend National Park Amphibian & Reptile Checklist](#)

Common names and phylogenetic sequence are from the 1993 Thirty-ninth supplement to the 1983 sixth edition of the American Ornithologists' Union *Checklist of North American Birds* as published in the April 8 1994 Auk 110:675-682.

Descriptive Notes

(Listed beneath non-hypothetical species).

Nesting species - Indicates that a species has been recorded nesting within the park.

Year-round resident - Denotes a sedentary or non-migratory species that lives in Big Bend all year.

--after breeding - The status of a species after breeding due to post-nesting dispersal. Most species notated as after breeding species do not nest within the park, but wander to the region after breeding. They will usually be seen in July or August in summer (and may stay through fall and winter), and are not designated as nesting species. Of the remaining eleven species, eight nest in Big Bend. Their status changes after breeding; either they disperse away from the park, becoming more difficult to find in July and August, or they become more active, and are easier to locate at this time. The last three species in this category neither nest in the park, nor are limited in occurrence to the months of July and August. Rather, they can be seen at any time during summer, although their status changes, as indicated, after breeding.

Big Bend specialty - Highlights a species that, for the United States and Canada, is found most easily within Big Bend National Park.

Southwestern U.S. species - Indicates a bird that, in North America (Canada and the United States), is limited to southern California; Nevada; Arizona; Utah; New Mexico; Colorado; and western Kansas, Oklahoma, and Texas. These species also occur in Latin America.

Extremely rare in U.S. - Refers to a Latin American species that very rarely visits the United States or is restricted in this country to very limited locales along the U.S.-Mexico border.

Neotropical migrant - Refers to a species that nests in the United States or Canada and winters in Mexico, Central America, the Greater Antilles, or (to a lesser degree) South America, often travelling thousands of miles between the two. Neotropical migrants are a shared resource between nations. They pose a great conservation challenge by requiring preserved habitats in both their summer and winter ranges, and, ideally, the protection of non-fragmented travel corridors between them.

Threatened or endangered species - A species that is federally threatened or endangered. As of this printing, both the Bald Eagle and Peregrine Falcon were candidates for down-listing or de-listing.

Historically occurring species - Denotes a bird whose range once commonly included Big Bend, but whose presence now is not fully understood. Explanations include local extirpation or unsuccessful reintroduction.

Key to Habitats

R - River floodplain. - Open water areas such as the Rio Grande, its corridor, tributaries, and isolated ponds. Also river cane, cattails, mesquite thickets, cottonwood trees, and other vegetation associated with the river, backcountry springs, marshes, and ponds. Included are Rio Grande Village Campground and vicinity, Daniels Ranch, Hot Springs, Cottonwood Campground, Basin sewage ponds, lower Window Trail, Old Ranch.

D - Shrub Desert. - The open desert up to about 3,500 feet. Rainfall averages less than 10" per year and plant life is most sparse. Includes Rio Grande Village area, Castolon, Maverick, Dagger Flat, River Road, Persimmon Gap.

G - Grasslands or foothills. - Chisos Mountains lowlands from around 3,500 to 5,000 feet. Sotol and agave (century plant) are common. Grasses abundant and shrubs common. Areas include lower Green Gulch (Basin Road), Government Spring, lower Pine Canyon, lower Blue Creek Trail, upper Window Trail, Basin Campground.

P - Pinyon-oak-juniper woodlands. - Chisos Mountains from about 5,000 up to nearly 8,000 feet. A woodland of Mexican pinyon pine, junipers, oaks, and other deciduous trees. Upper Green Gulch, Lost Mine Trail, South Rim Trail.

M - Moist woodland. - Mountain canyons and woodlands generally above 6,000 feet and dominated by Arizona cypress, Douglas-fir, Texas madrone, and Arizona pine. Examples are Boot and Pine Canyons and similar sheltered Chisos Mountains highlands.

Key to abundance

com - Common - Regularly seen on most outings in varying numbers.

loc - Locally common - Easily found only in a specific area of the park.

fai - Fairly common - Regularly found in suitable habitat

unc - Uncommon - Present in suitable habitat, but not regularly seen.

spo - Sporadic - Not present every year. Fluctuates in occurrence and numbers.

rar - Rare - Rarely seen even in suitable habitat. Five or more park records.

acc - Accidental - Confirmed for the park, but out of normal range. Less than five park records.

At the end of the list are the following two hypothetical species lists:

hyp - Hypothetical - (Reported for Big Bend National Park and confirmed elsewhere in Texas)
Plausible, but not authenticated for Big Bend by specimen, photograph, or unquestionable documentation or has not been reported during the last 20 years. Species has been confirmed elsewhere in Texas by the Texas Bird Records Committee.

Hypothetical - (Reported for Big Bend National Park, but confirmed nowhere else in Texas)
Also unconfirmed for Big Bend. These hypotheticals would constitute first state records for the species and have not been accepted by the Texas Bird Records Committee due to inadequate documentation.

Approximately 10 species more than the 446 presented in this checklist have been reported for Big Bend. They are not listed, because the likelihood of their occurrence is extremely remote and documentation is poor or absent.

Seasons

(Spring and fall listings are for residents and migrants; summer and winter listings are for residents and visitors).

Spring - Late February through early May.

Summer - May through August.

Fall - Mid-August through early December.

Winter - December through late February.
